Overview

The BDS IOS has two components: a desktop PC (server) and the Surface tablet (client). The server software is automatically started when the PC is booted. It takes about two minutes for this to happen.

How to Start the IOS Client

- Power on the Surface (the power button is at the top on the left). The Surface will automatically log in and connect to the router.

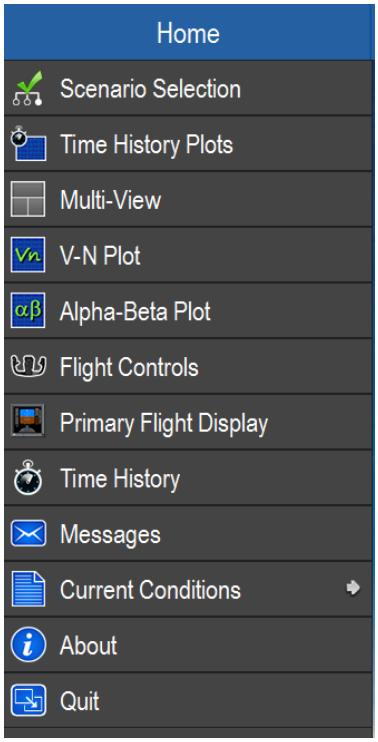

- The Surface can be started in online mode i.e. connected to the server or offline mode i.e. not connected to the server. To start it in online mode, double-click the *Launch IOS Client* icon. To start it in offline mode, double-click the *Launch IOS Client Offline* icon.

- The Navigation Menu can be displayed using icons or icons and text. The view is switched by pressing the three horizontal lines on the toolbar.

Toolbar

Navigation Menu

Run/Freeze Button

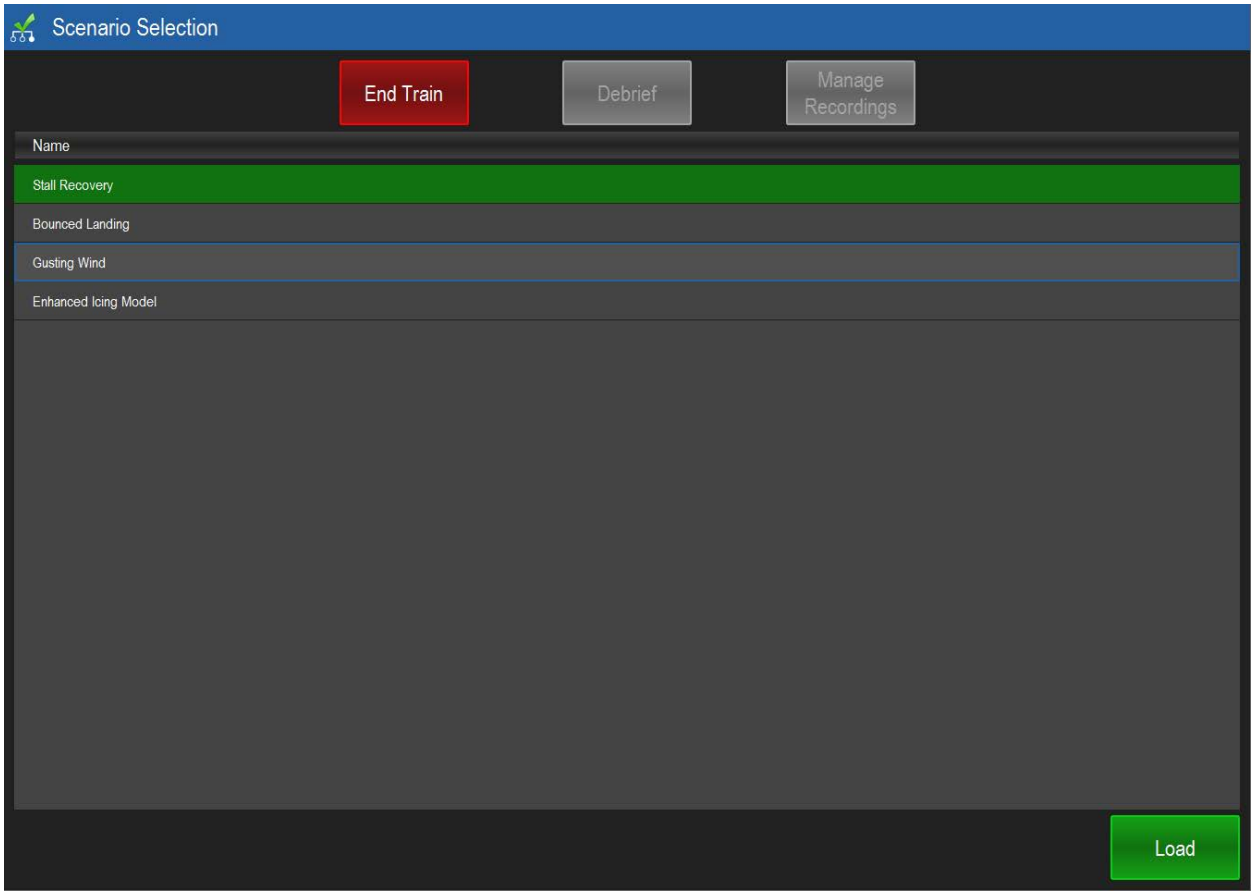

The Run/Freeze button (airplane symbol) is tied to Flight Freeze. Flight Freeze can be controlled by pressing the button. The Submode readout will reflect the current state of Flight Freeze.

How to Load or Unload a Scenario

- Go to the Scenario Selection page and press the **Train** button. A list of scenarios will appear. Upon selection of the desired scenario the **Load** button will become available; press it to load the selected scenario.

- The **Load** button will change to the **Unload** button; press it to unload the selected scenario.

How to Start or Stop a Recording

- The Start Recording button is a round green button that looks as shown.

- Press the button to start a recording. A popup will appear with two selections: Left Seat and Right Seat. Choose the desired seat and then recording will begin. The selected seat is used in the name of the recording.

- When you are finished, press the Stop Recording button (a red square).

How to Playback a Recording

Playback a Recording in Online Mode

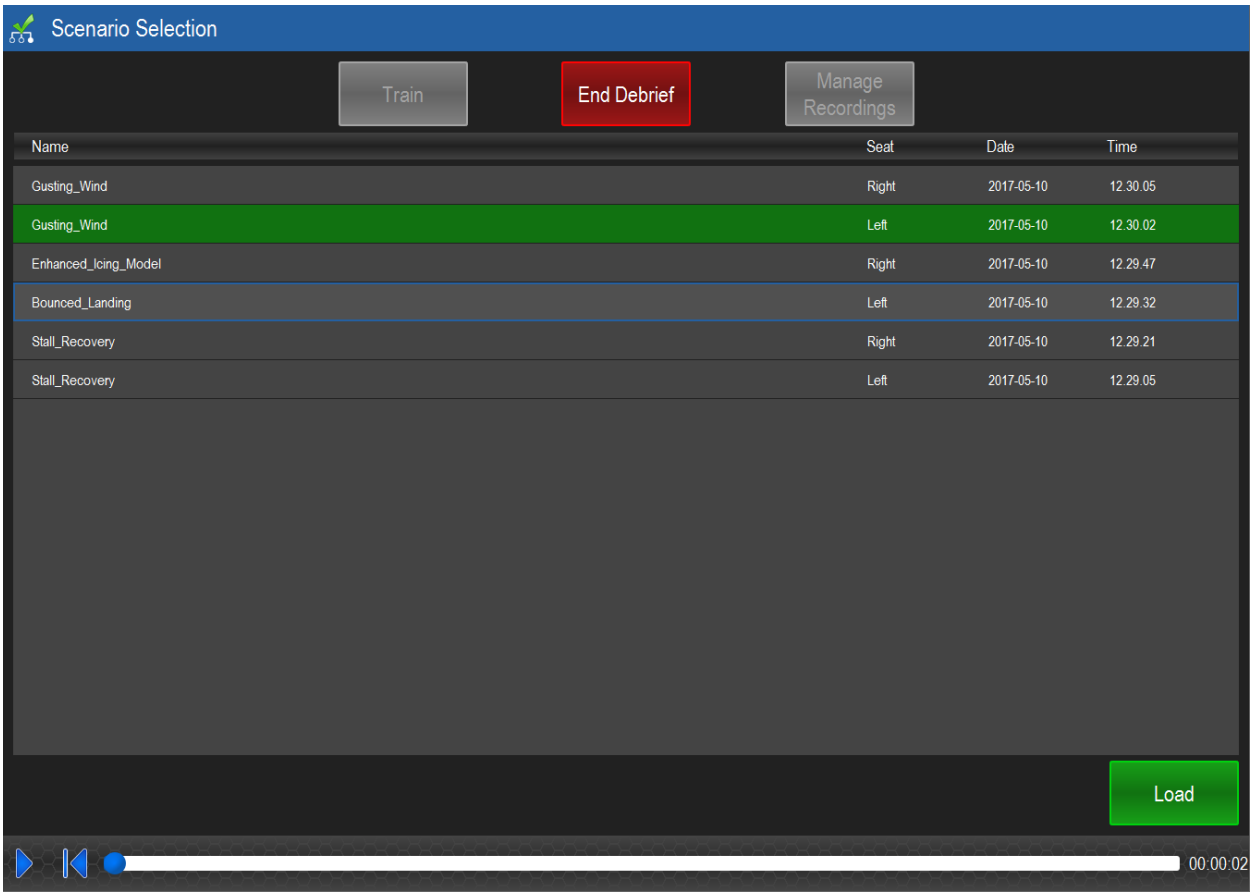

To playback the recording in online mode i.e. connected to the server, exit from training mode by going to the Scenario Selection page and pressing the **End Train** button.

Playback a Recording in Offline Mode

To playback the recording in offline mode i.e. not connected to the server, press the **Quit** button and then select **Close** from the Close Application dialog box. On the Surface desktop, double-click the *Launch IOS Client Offline* icon. Go to the Scenario Selection page.

- Press the **Debrief** button and a list of recordings will appear. Upon selection of the desired recording the **Load** button will become available; press it to load the selected recording.

- The **Load** button will change to the **Unload** button; press it to unload the selected recording.

- The debrief controls will be displayed at the bottom of the screen. Press the **Run/Freeze** button to start the playback.

- The Submode readout at the top of the screen will reflect the current state of the playback.

- If you want to seek to a particular point in the recording, the playback must first be frozen.

- To exit from debrief mode, go to the Scenario Selection page and press the **End Debrief** button.

How to Manage Recordings

- Go to the Scenario Selection page and press the **Manage Recordings** button. A list of recordings will appear.

- To delete all recordings, press the **Delete All** button. To delete an individual recording, select the desired recording and press the **Delete** button. In both cases a confirmation popup will be displayed.

- To exit from this mode, press the **Done** button.

How to Stop the IOS Client

To stop the IOS Client, press the **Quit** button on the Navigation Menu and then select **Close** from the Close Application dialog box. If the client was started in offline mode, double-click the *Kill IOS* icon.
